STAT

Dear Sir:

Your letter of 6 July 1960 to Mr. Allen Dulles regarding "The Photographer in Space" program has been referred to me and I would like to suggest the names of several technical people who have examined available data and perhaps formed judgments of Russia's photo capability in terms of space technology. Mr. Amrom H. Katz and Mr. T. F. Burke, Rand Corporation, Santa Monica, California, have studied the question and published some of their findings in such papers as Rand P-1935, "On the Back-of-the-Moon Photographs--More Data, Photographs and Speculation", 10 February 1960.

Earlier, a large Rand staff under the technical direction of Dr. Robert W. Buchheim prepared the "Space Handbook: Astronautics and its Applications" as a Staff Report of the House Select Committee on Astronautics and Space Exploration, U.S. Government Printing Office, Washington: 1959. In the forward listing of people who worked on the Space Handbook are the names of many technical people who might be considered in connection with your program. For your convenience I am forwarding a copy of the Space Handbook herewith. You will also notice that all through the Handbook are footnotes which list the names of workers and other references which could provide additional leads.

I trust that this information will prove useful and wish you and the organizations you represent much success for our national good at the Chicago meeting.

Yours very truly,

Assistant to the Director
